
Surfaces

- To clean the table surfaces, use a damp cloth or sponge and a mild soap or detergent.
- Use a soft, non-abrasive cloth and lightly dampen it in the diluted cleaning solution.
- DO NOT USE abrasive cleaners or cloths. This will cause scratching.
- Use a fresh dry cloth to absorb all remaining moisture off of the surface. Any remaining moisture can leave discoloration and marks.

Abrasive cleaners include, but are not limited to:

- Hydrochloric Acid
- Muriatic Acid
- Bleach
- Hydrogen Chloride
- Sulfuric Acid
- Oleic Acid
- Oil of Vitriol
- Oleum
- Hydrofluoric Acid
- Rust Remover
- Phosphoric Acid
- Sodium Hydroxide
- Caustic Soda
- Caustic Lye
- Soda Lye
- Pumice (abrasive)

Metal Table Bases

- To clean the table bases, use a damp cloth or sponge and a mild soap or detergent.
- Use a soft, non-abrasive cloth and lightly dampen it in the diluted cleaning solution.
- DO NOT USE abrasive cleaners or cloths. This will cause scratching.
- DO NOT soak the base in water. This will cause rusting.
- Use a fresh dry cloth to absorb all remaining moisture off of the surface of the table base.

Abrasive cleaners include, but are not limited to:

- Hydrochloric Acid
- Muriatic Acid
- Bleach
- Hydrogen Chloride
- Sulfuric Acid
- Oleic Acid
- Oil of Vitriol
- Oleum
- Hydrofluoric Acid
- Rust Remover
- Phosphoric Acid
- Sodium Hydroxide
- Caustic Soda
- Caustic Lye
- Soda Lye
- Pumice (abrasive)

Handling and Moving Tables

Moving tables can be a challenging task, especially if you don't know how to do it correctly. To ensure that you and your table are safe during the moving process, please follow the instructions below:

- 1. Gather the necessary tools:** Before moving your table, you will need some basic tools such as a screwdriver, pliers, and wrenches. These tools will come in handy for the required disassembly.
- 2. Clear the area:** Before attempting to move the table, make sure that the surrounding area is clear of any obstacles. This will prevent tripping or bumping into anything, which could cause injury or damage to your table.
- 3. Disassemble the table:** NEVER lift a table by the surface with the base or bases still attached. This can cause the adhered substrate or screws to disconnect from the surface causing irreparable damage. Always remove the surface of the table from the base prior to moving. This will make it easier to transport and reduce the risk of damage.
- 4. Move the table carefully:** When moving the table, be sure to carry it slowly and steadily. Avoid sudden movements or jerks that could cause the surface or base to fall.
- 5. Reassemble the table:** Once you have transported the surface and base to its new location, reassemble the table by using the tools you gathered earlier. Take care not to over tighten any screws or bolts, as this could damage the table.

Please note that our company is not liable for any damages or injuries that may occur from or improper handling or moving of the table. We highly recommend that you take the necessary precautions to ensure your safety and the safety of the table during the moving process.

Relocating your tables can be a challenging task, but following these instructions will help ensure that you do it safely and without incident.
